

E-valve by

The perfect system for remote network management and management of water services:

Whilst remote meter reading has been available for some time, we are now able to offer a fully controllable system, making it ideal for network management and control.

- Direct control of the valve: opening, closing or limited flow.
- Scheduled maintenance.
- Access to historical data, to statistics, therefore water usage.
- Add to BREEAM scores by water management.

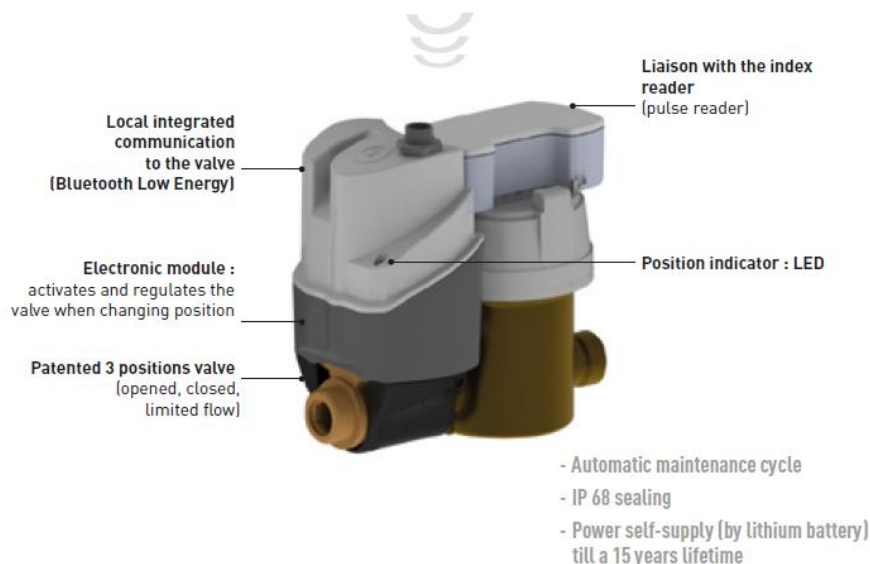

All via Smartphone app (iphone) connected to the valve via BLE (Bluetooth Low Energy)

Benefits for the water operator and the consumer:

- Remote billing facility also for set volume of water (Holiday Park & remote locations)
- Remote action without travel time or cost.
- Efficient use of resources.
- No or minimal inconvenience to the consumer.
- Alarm for unspecified use, leakage identification and damage limitation.

Smartphone application :

Provides control and configuration of the valve by transmitting the selected information.
